

## CLAIM AMENDMENTS

Claims 1 - 11 (cancelled)

1                   Claim 12 (currently amended) A bar-shaped lamp  
2 comprising:  
3                   an elongated shaft;  
4                   a lamp head affixed to one end of said shaft and  
5 comprising a plate, a plurality of light-emitting diodes mounted on  
6 said plate and a spiral contact spring resiliently engageable with  
7 a battery in said shaft; and  
8                   a reversible elongated foot member receivable in said  
9 shaft at an opposite end of said shaft and having at a first end of  
10 said foot member an elongated conical spike adapted to be inserted  
11 into the ground and at a second end of said foot member a conical  
12 impact tool capable of rupturing a vehicle window, said spike and  
13 said tool having respective apex angles with the apex angle of said  
14 spike being less than the apex angle of said tool, said foot member  
15 having a portion between said spike and said tool which is flush  
16 with said shaft and adapted to be inserted into said shaft;  
17                   a threaded connection replaceably securing said lamp head  
18 on said shaft; and  
19                   a plate, a plurality of light-emitting diodes mounted on  
20 said plate and a spiral contact spring resiliently engageable with  
21 a battery in said shaft; and

22                   a cap adapted to receive said tool and threaded onto said  
23                   foot member.

1                   Claim 13 (previously presented) The bar shaped lamp  
2                   defined in claim 12, further comprising an elongated light-  
3                   transmitting body affixed to said head and illuminatable thereby.

1                   Claim 14 (previously presented) The bar-shaped lamp  
2                   defined in claim 13 wherein said body is a rod of a light-  
3                   conducting plastic.

1                   Claim 15 (previously presented) The bar-shaped lamp  
2                   defined in claim 14 wherein said rod is composed of  
3                   polymethylmethacrylate and is threadedly connected to said shaft.

1                   Claim 16 (currently amended) The bar-shaped lamp defined  
2                   in claim ~~1~~ 12 wherein said shaft comprises a battery holder and a  
3                   compartment dimensioned to receive said spike.

1                   Claim 17 (previously presented) A bar-shaped lamp  
2                   comprising:  
3                   an elongated shaft;  
4                   a lamp head affixed to one end of said shaft and provided  
5                   with a light source;  
6                   a reversible elongated foot member receivable in said  
7                   shaft at an opposite end of said shaft and having at a first end of

8       said foot member an elongated spike adapted to be inserted into the  
9       ground and at a second end of said foot member an impact tool  
10      capable of rupturing a vehicle window, said shaft comprising a  
11      battery holder and a compartment dimensioned to receive said spike;  
12      and

13                a cap adapted to receive said tool and threaded onto said  
14        foot member.

1                Claim 18 (previously presented) The bar-shaped lamp  
2        defined in claim 17, further comprising an elongated light-  
3        transmitting of an acrylic resin body affixed to said head and  
4        illuminatable thereby.

1                Claim 19 (previously presented) The bar-shaped lamp  
2        defined in claim 18 wherein said lamp head comprises a plate, a  
3        plurality of light-emitting diodes mounted on said plate and a  
4        spiral contact spring resiliently engageable with a battery in said  
5        shaft.

1                Claim 20 (previously presented) The bar-shaped lamp  
2        defined in claim 19 wherein said foot member has a portion between  
3        said spike and said tool which is flush with said shaft and adapted  
4        to be inserted into said shaft.
